- Charles Maina - Scrum Master.
- Joseph Muema - Back End Developer.
- Canssidle Wairimu - Back End Developer.
- Faith Kazungu - Front End Developer.
- Galaano Suleiman - Front End Developer.

BILLTRACKER

PROBLEM STATEMENT

When we have several bills to pay monthly or equally, there is a 60% chance that you will either get late or forget to make the payment. Bill tracker helps you solve this problem.
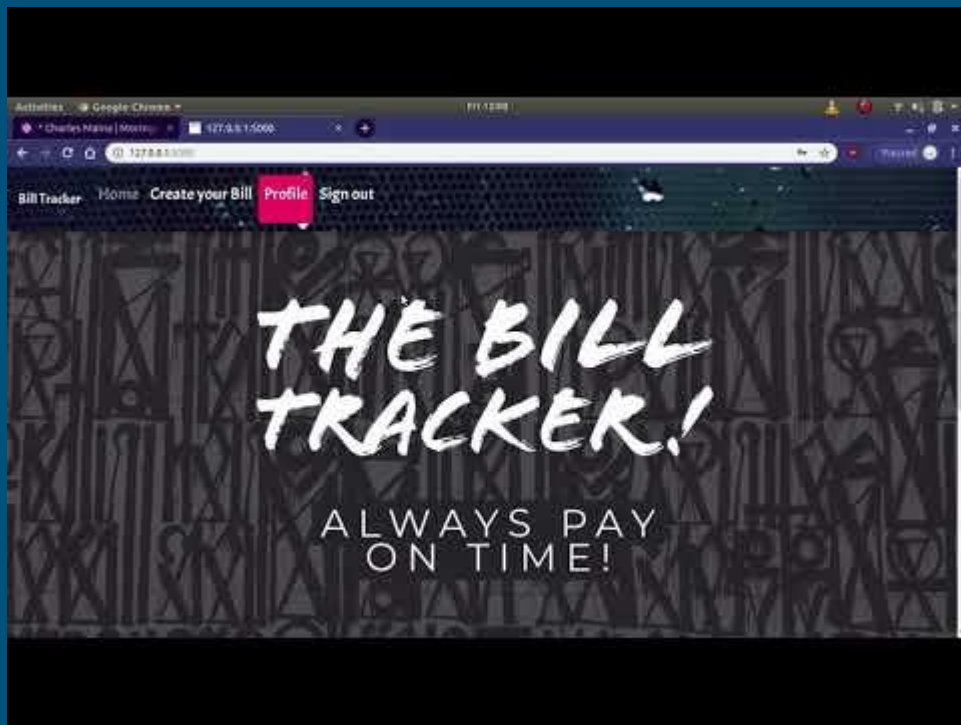

HOW BILL TRACKER WORKS

★ Input bills you want to pay on time.

★ When bill is due the program reminds you of the bill.

★ You pay the bill before being penalized!

DEMO

DEVELOPMENT PROCESS

Day 1: Brainstormed and collected data.

Day 2: Divided the work and assigned each member roles.

Day 3: Each member worked on their components.

Day 4: Merged the project.

Day 5: Presentation.

Technologies used

1. Flask
2. Python
3. HTML
4. Bootstrap
5. Postgres

Challenges

1. Adding a calendar to the system.
2. A feature to send you an email on the due date.
3. Merge errors.

Future Implementations

1. Create a working payment method.
2. Create a mobile application for the project.
3. Add a function to send you emails.
4. Making a mobile application where you just record yourself so that saves it in form of a voice note.

Questions and Feedback

Thank you for your time.

Any questions or feedback?
